Omniva installs larger parcel machines in Harju-Risti and Oru

20-11-2026

On 18 November, Omniva replaced the existing parcel machines in Harju-Risti and Oru with larger ones. In Harju-Risti, the single-module parcel machine was replaced with a three-module machine, while in Oru, the two-module machine was replaced with a three-module machine. The larger machines provide local residents with more capacity to send and receive parcels close to home.

The larger parcel machines are located at the existing sites:

- Harju-Risti Meie store parcel machine: Harju-Risti village, Lääne-Harju municipality, Harju County.

– Oru Meie store parcel machine: Tähepaju tee 5, Oru village, Kose municipality, Harju County.

How to use the parcel machines

Receiving parcels

When your parcel arrives at the parcel machine, you will receive a notification with a door code via SMS, email or the Omniva app.

At the parcel machine, press “Start” on the keypad, enter your door code and press “OK”. The locker door will open. Collect your parcel and close the door.

You can change your notification preferences (SMS, email or app notifications) in the Omniva app. By default, notifications are sent via SMS and email.

Sending parcels

You can send both domestic and international parcels from these parcel machines. To do so, register your parcel in the Omniva app or via our self-service platform at minu.omniva.ee.

Then go to the parcel machine. To drop off your parcel, scan the QR code on the machine or start the drop-off process in the Omniva app. Follow the instructions to open the locker door and place your parcel inside.

Instructions for using the parcel machine are also available on the machine itself.
