

DPD joins Estonian ‘open locker’ system Collect.Net

05-12-2017

DPD has joined parcel technology specialist Cleveron’s Collect.Net shared network of PackRobots in Estonia. The Collect.Net network consists of eight PackRobots installed in four bigger cities in Estonia and works on the principle of shared network. This means that any courier company can use the terminals for their deliveries. DHL already started using the machines as delivery points last year.
