

Austrian Post strengthens its parcel locker network with an additional post station at Lentia City in Linz

18-09-2025

The demand for flexible and contactless parcel delivery solutions continues to rise - especially in high-traffic locations. As part of their successful collaboration, KEBA and Austrian Post have installed another 24/7 post station at Lentia City, a central shopping and service hub in Linz Urfahr, Upper Austria.

Equipped with 28 modules and 295 compartments, the new locker – put into operation this spring – significantly increases the site's parcel capacity. It perfectly complements the existing station with 22 modules and 287 compartments, which has been in use since autumn 2017. Customers and delivery personnel benefit from the expanded storage space, which allows for more flexible and convenient use – even during peak parcel volumes. In total, 582 compartments are now available at Lentia City, offering a greatly increased capacity for daily parcel handling.

Convenience that fits everyday life
Whether before shopping, during lunch break or late at night – the new post station in Lentia City is accessible around the clock in the indoor area next to the post office branch. It ideally supplements the original locker, which has been operating successfully for years. Together, the two stations offer even more convenience and flexibility, enabling parcel pickup to be

seamlessly integrate into everyday routines without stress or time pressure.

Walter Oblin, CEO, Austrian Post AG: "KEBA has been a long-standing and reliable technology partner when it comes to innovative, forward-looking 24/7 solutions. Together, we are consistently driving the nationwide expansion of our self-service network across Austria – setting new standards for flexible, modern parcel delivery with maximum convenience and service for our customers."

Christoph Knogler, CEO, KEBA Group AG: "At KEBA, we are committed to our mission of making people's lives easier through the targeted use of technology and innovation. The continuous expansion of the parcel locker network in Austria by our long-standing partner, Austrian Post, is an excellent example of this. We are, of course, especially delighted about the new post station at Lentia City, right in the heart of our hometown Linz."

Beyond the practical benefits for users, post stations like the one at Lentia City also contribute to sustainability. By consolidating deliveries at a central point, many individual household stops can be eliminated. Instead of delivering each parcel separately to various private addresses, shipments are efficiently deposited at a nearby station. This leads to substantial savings in travel distances and emissions.

Technology from Linz for Linz.

KEBA is considered a pioneer in automated parcel handover solutions: as early as 2000, the company began developing concepts for automating parcel logistics. Just one year

later, the first parcel locker was successfully launched in cooperation with German postal service provider DHL—marking a milestone for the entire industry.

Today—25 years later—KEBA looks back on more than 30,000 parcel lockers delivered worldwide, comprising over 2.3 million compartments.

What began as an innovation project a quarter of a century ago has now become an integral part of modern parcel handover solutions. With technological expertise, decades of experience, and a clear focus on partnership-based collaboration, KEBA is actively shaping the future of parcel logistics.
