Postiâ€™s logistics centre in JÃ¤rvenpÃ¤Ã¤ achieves BREEAM Excellent environmental certification

13-10-2026

Postiâ€™s logistics center in Järvenpää has been awarded the internationally recognized BREEAM New Construction environmental certification. The certification demonstrates that the property meets high standards for environmental sustainability, energy efficiency and occupational safety.

The building achieved 73.7% of the available points in the assessment, qualifying it for an Excellent rating. The Järvenpää logistics center performed particularly well in the assessment of energy efficiency, indoor environmental quality, responsible materials and sustainable construction practices.

“The BREEAM Excellent certification demonstrates that we have successfully combined the needs of modern logistics with ambitious sustainability targets. Energy efficiency, a safe working environment and the building’s long-term durability were key objectives from the very beginning of the project,” says Antti Wikström, Vice President, Contract Logistics, Posti Finland.

Particular attention was paid to energy efficiency, the use of renewable energy, reducing water consumption and sustainability sourcing of construction materials in the design of the Järvenpää logistics center. The site also includes solutions that support bicycle parking and electric vehicle charging facilities.

BREEAM, the Building Research Establishment Environmental Assessment Method, is one of the world’s leading environmental assessment systems for buildings. It assesses a building’s sustainability throughout its lifecycle, including energy consumption, materials, water use, indoor environmental quality and biodiversity.

The certification also supports Posti’s climate targets. Posti aims to achieve fossil-free road transport and fossil-free energy for its facilities by 2030, and net zero emissions by 2040. Read more about our plan for achieving these targets in the Annual Report 2025.
