PoÅ¡ta Slovenije receives recognition for establishing the largest fleet of clean vehicles in Slovenia

14-04-2026

â€‹â€‹â€‹With its project to establish the largest fleet of clean vehicles in Slovenia, the Slovenian Post Office became the winner of the readers' choice award in the Energy Efficiency in Transport and Logistics category, organized by the newspaper Finance, and also received a special award selected by an expert committee.

The fleet of the entire Pošta Slovenije Group consists of 3,470 vehicles, of which 885 are already clean vehicles, which is 26 percent. This year we will increase this share to 33 percent.

We introduced the first electric vehicles to our fleet in 2017. Now, 26 percent of our vehicles are clean, of which 22 percent are electric. This year, we plan to increase our electric fleet with e-delivery vans, e-tricycles, e-bikes, and also with the first electric freight vehicle. At Pošta Slovenije, we have a total of 746 light delivery vehicles, 373 medium delivery vehicles, and 92 freight vehicles. Of these, 121 are electric light delivery vehicles, 24 e-scooters, 140 e-bikes, 60 e-tricycles, five electric medium light delivery vehicles, and 264 electric quadricycles. We already deliver with electric vehicles in more than 100 municipalities, and so far we have also established 98 charging stations for electric vehicles, and this year we will build more than 120 new charging points. Intereuropa has approximately 212 delivery vehicles and 140 light delivery vehicles.

We will continue to increase the share of clean vehicles across the entire group in the future. Investing in the transformation of the fleet into clean vehicles and the associated charging infrastructure, solar power plants, digitalization and automation of operations, and expanding the network of pick-up and drop-off points significantly contributes to reducing our carbon footprint.

Awards and recognitions for energy efficiency were presented at the Energy Workers' Days, which will take place in PortoroÅ¾ from 14 to 15 April 2026.
