International Post Corporation

IPC further enhances RFID services

28-11-2024

Postal operators are already using for several years the RFID Item Tracking and RFID Receptacle Tracking solutions via IPCâ€™s RFID services. IPC in close collaboration with the posts participating in the services, reorganised RFID services to create efficiencies within the existing services and better support postal operators.

Starting 2025, IPC will offer the postal operators using the RFID services two new consolidated services:

- RFID Tracking services and solutions: all RFID solutions for items, receptacles and assets are included in the service providing the posts operational, business and commercial solutions using their RFID infrastructure.
- RFID usage performance: monitoring RFID data performance via KPIs and specific reports, expert support to Postal Operators, monitoring RFID infrastructure performance for domestic and international postal facilities.

Recently the service further expanded with An Post joining RFID services and RFID Receptacle Tracking service, and Poste Italiane starting outbound RFID receptacle tracking to several destinations.

IPC's RFID services can be consulted here
