

EDI – The key to post-airline supply chain integration

19-10-2017

In collaboration with UPU and IATA, IPC has released the second edition of the EDI Guide. Aimed at postal operators, airlines, and industry professionals, the Guide is an introduction to end-to-end process integration through Electronic Data Interchange (EDI).

In collaboration with UPU and IATA, IPC has released the second edition of the EDI Guide. Aimed at postal operators, airlines, and industry professionals, the Guide is an introduction to end-to-end process integration through Electronic Data Interchange (EDI).

The benefits of integrating EDI in the mail process can be easily identified: by using EDI technology, users are able to overcome the challenges faced by the industry in terms of customer expectations and regulatory requirements. The increased use of EDI

technology supports the integration of the postal and airline industries, with the objective of providing increased visibility and automation to international mail throughout its lifecycle, and creating paper free business processes.

EDI technology is highly praised by its current users, and has testimonials by Deutsche Post DHL, Delta Airlines and Qantas, among many.
