

## Mozambique: Deutsche Post DHL Group Disaster Response Team provides logistical support following devastating tropical cyclone Idai

28-03-2019

On the night of March 14th to 15th, cyclone Idai made landfall in Mozambique and neighboring countries Zimbabwe and Malawi. A series of storm surges and massive flooding followed, causing widespread damage and destruction. In Mozambique hundreds of thousands of people are said to be homeless, electricity supply is sporadic and large swathes of the country are cut off from the outside world. Current reports say there are 550 casualties, but estimates point to as many as one thousand. The Mozambique government has declared a state of emergency. Extensive damage to infrastructure such as communications systems, electricity supply and roads is making it extremely difficult to provide humanitarian help and logistics. Deutsche Post DHL Group has deployed its Disaster Response Team (DRT) to provide assistance at the local airport in Beira. The DRT advises airport personnel and coordinates incoming humanitarian aid for non-governmental organizations (NGOs). This first DRT deployment to Africa is headed by Chris Week, Director for Humanitarian Affairs at Deutsche Post DHL Group. He is accompanied by a team of DHL volunteers from the United Arab Emirates, Mozambique and South Africa.

The United Nations and other humanitarian organizations have also deployed staff to Beira. Many of the helpers are still at the airport and are organizing safe options for onward transport. "There isn't much aid coming in right now," Chris Weeks explains, "but we expect that to change as the UN has allocated USD 20 million to provide humanitarian help." The Disaster Response Team is cooperating closely with national and international humanitarian aid organizations, and with the responsible airport personnel to provide logistical support. "In the wake of a natural disaster, logistical coordination of relief supplies is crucial," says Weeks. "As

logistics specialists with vast experience in disaster management, our skills and expertise can help save lives. We help airport personnel to process relief supplies quickly so that they reach the victims of the cyclone in the fastest possible time."

"We have been here since the start of the week. One and a half weeks after the disaster, conditions in this part of Mozambique remain critical. The rain hasn't let up, the floodwater can't drain away and the river continues to rise," says Weeks. "Right now, the airport in Beira is one of the few places in the city that is dry and has functioning infrastructure." The

airport is currently receiving most of the incoming aid such as water, food, tents, fuel, medical supplies and technical equipment. These are sorted and distributed in Beira as well as in rural areas and other places affected by the cyclone.

"It's hard to estimate the full extent of the

damage and destruction caused. We'll no doubt see follow-on effects over the next few days - such as outbreaks of diseases like malaria, which is fostered by stagnant water and increases the need for medical supplies. Our team is standing by to help," says Weeks.
