

CTT and EDP join forces to market energy offers at CTT Points.

21-04-2026

CTT - Correios de Portugal and EDP are strengthening their partnership to offer customers a new, simple, and convenient way to subscribe to EDP Comercial energy. At CTT Points throughout mainland Portugal, customers will be able to learn in detail about the best EDP Comercial energy offer, quickly simulate potential savings, and subscribe directly on-site.

This service is already available in over 260 CTT Points, across all districts of mainland Portugal. The expectation is that it will be progressively expanded to more locations, taking advantage of the company's extensive retail network, present from north to south of the country.

With this partnership, CTT reinforces its strategy of offering and diversifying services, presenting customers with solutions from a leading partner in the energy sector. This association with EDP Comercial adds value to the existing offer, positioning CTT Points as convenient locations where customers can access various services in a single space.

The proximity and convenience of the CTT network make it easier and more accessible to obtain information about EDP Comercial's offerings, or even to complete the entire process of switching energy suppliers.

For its part, EDP reinforces its commitment to convenience and simplicity in the lives of

Portuguese families, offering affordable and easy-to-access electricity solutions, available through the country's largest retail network. This extensive presence allows EDP Comercial to remain close to the Portuguese people, consolidating its leadership in the energy market with more than three million families as customers.

The goal of both companies is to ensure that, regardless of geographical location, CTT customers have easy and convenient access to information and the various electricity offers from EDP Comercial.

Through EDP's channels - edp.pt, telephone lines or EDP Comercial stores and agents throughout the country - the company currently offers different deals, with discounts on the price per kWh, on the cost of power or with a fixed monthly discount, tailored to the profiles and needs of different families and energy requirements.

EDP and CTT maintain a long-standing

partnership based on the development of solutions and products that contribute to decarbonization. In 2022, CTT and EDP established a strategic partnership to install Solar Neighborhoods in dozens of locations, allowing CTT to produce its own energy, reduce grid consumption, and share the benefits with approximately eight thousand families and small businesses. In subsequent years, CTT chose EDP Comercial as its

exclusive supplier to implement 750 charging points, supporting the electric mobility of its fleet of nearly 1,500 vehicles. More recently, the partnership was strengthened with the integration of 200 CTT stores as neighbors of EDP Solar Neighborhoods, promoting the expansion of this model in Portugal.
