

POST Luxembourg is integrating Tap on Mobile into its banking offering for business customers

14-04-2026

POST Luxembourg has announced the integration of Worldline Tap on Mobile into its range of financial services for business customers. This mobile payment solution, developed by Worldline [Euronext: WLN], a European leader in payment services, enables businesses to accept contactless payments directly via a smartphone or tablet equipped with a dedicated app linked to their POST Finance account.

At a time when many businesses have neither the budget nor the need for a traditional payment terminal, POST Finance and Worldline offer a simple, mobile and secure solution for accepting in-person payments at particularly competitive rates. This partnership demonstrates their shared commitment to making basic financial services accessible to businesses.

Worldline Tap on Mobile allows merchants to accept a wide variety of payments: Mastercard, Visa, Apple Pay, Google Pay and other payment methods. Contactless payments can be made via a recent Android or iOS device equipped with NFC technology, in full compliance with international standards. This solution is aimed at retailers, self-employed professionals, SMEs, associations and sports clubs who prefer a mobile, cost-effective and quick-to-implement alternative.

Gabriel de La Bourdonnaye, Director of POST Finance, said: "With Worldline Tap on Mobile, POST Finance is meeting the practical needs of its business customers. This roll-out is part of our commitment to providing long-term support to our business customers by offering them modern, simple and cost-effective tools for their day-to-day operations."

Stephan Jacobs, Head of the Small and Medium-sized Enterprises segment for the BeNeLux region at Worldline, comments: "Worldline is proud to partner with POST Luxembourg in a clear commitment to making payments accessible and simple. This partnership illustrates our shared ambition to democratise digital payments and facilitate access to modern solutions for the benefit of the Luxembourg economy."
