

## E-commerce continues to drive postal growth

14-07-2022

â€¢ Preliminary 2021 results show average revenue growth of 3.8% for posts worldwide â€¢ Key growth driver for most posts was parcels, driven by B2C e-commerce

**Brussels, 14 July 2022** – According to preliminary results published today by International Post Corporation (IPC), postal operators worldwide saw revenue increase by 3.8% on average in 2021 up from 1.4% in 2020.

As the pandemic evolved throughout the year, postal industry growth was driven by strong demand for B2C e-commerce logistics as posts delivered more packets and parcels to online shoppers across the globe. Following the surge in e-commerce as the pandemic struck in 2020, parcels growth continued in 2021 with some posts reporting that volumes rose by more than a third compared to the prior year.

Holger Winklbauer, CEO of IPC, commented on the results: “The 2021 results show the resilience of the postal sector and its capacity to build on the e-commerce surge. However, cost pressure in the parcel delivery market remains high, in part due to rising fuel prices and labour shortages. Nevertheless, some posts in Europe reported declines in inbound international e-commerce packet volumes in the second half of 2021 as VAT exemptions for low-value goods were removed in the EU in July. The economic crisis and the war in Ukraine are likely to further affect volumes”.

Driven by the growth in e-commerce, some posts now report that parcels account for more than half of total revenue. Posts continued to invest in expanding sorting capacity and automation to meet the growth

in e-commerce delivery volumes and further improve delivery times. Many posts have also expanded their parcel pick-up and drop-off solutions, such as parcel lockers, to provide more convenient delivery options for consumers and improve last-mile efficiency.

Competition remained very strong in the dynamic B2C parcel market as delivery companies continued to compete to win new contracts, large e-retailers increasingly invested in their logistics networks, and new players looked to grow their share of the last-mile delivery market. In the mail segment, e-substitution was the key driver of the structural decline in traditional letter volumes. Many posts reported a decline in total mail volumes in 2021, though some noted a partial recovery in advertising mail as business activity picked up after governments eased COVID-19 restrictions during the year. Other posts reported that declines were in part offset by elections and pandemic-related communications, including vaccination notices.

Throughout the year, posts focused on improving the efficiency of mail operations and adjusted letter rates to sustain their affordable, reliable, one-price-goes-anywhere postal services.

Looking ahead, e-substitution is expected to drive the ongoing decline in mail volume worldwide. Meanwhile, the structural shift from mail to parcels is set to continue as posts look to meet the ever-evolving needs of consumers through providing fast, reliable, convenient, and competitively priced delivery

services.

The complete 2021 results as well as results for the first half of 2022 will be presented in the IPC Global Postal Industry Report, which will be published in November 2022. The report will include a comprehensive and detailed review of the postal industry, covering over 50 postal operators worldwide and analysing key market trends. A publicly available summary, the IPC GPIR Key Findings, will also be published in November.

#### **About International Post Corporation**

International Post Corporation (IPC) is the leading service provider of the global postal industry that provides leadership by driving service quality, interoperability and business-critical intelligence to support posts in

defending existing business and expanding into new growth areas. It is a cooperative association of 26-member postal operators in Asia Pacific, Europe and North America. IPC's solutions and services are used by over 180 posts worldwide. Since 1989 IPC has set standards for upgrading quality and service performance and developed technological solutions that help members enhance service for international letters, packets and parcels. IPC engages in industry research, creates business-critical intelligence, provides a range of platforms and programmes for member post CEOs and senior management to exchange best practices and discuss strategy. IPC also manages the system for incentive-based payments between postal operators.
